

Letting our wildflowers grow for nature

We are making a change for nature.

Working with wildlife and letting our wild plants grow, helps not only the wildflowers and fungi, but also the bees, birds and butterflies.

We are nurturing nature by:

- Letting our wildflowers complete their full cycle
- Cutting and collecting the grass, just twice a year
- Making long-term management commitments for nature and climate

Wildflower-rich habitats are amazing spaces that can:

- Improve biodiversity
- Store carbon
- Improve air quality
- Benefit our physical and mental wellbeing

In our wildflower-focused approach, we are being **sensible about safety** and framing our verges and green spaces with a shorter cut where needed.

By cutting less and later, we can let wild plants get a head start. So, just sit back and watch the flowers grow.

We're taking part in Plantlife's No Mow May movement (and beyond!) by following the road verge and green space best practice guidance.
